| Meningococcal Meningitis is a bacterial illness affecting the brain. It can be spread by a cough, sneeze, kiss, sharing drinks, or by any other direct contact or airborne | | | | |
| means of transportation. Therefore, students/campers residing in small areas, such as dormitories, are at an increased risk for contracting the illness. | | | | |
| The signs and symptoms of Meningococcal Meningitis are similar to the common flu often making it hard to detect. The signs and symptoms include the following: high fever, nausea, vomiting, fatigue, headache, stiff neck/back, skin rashes, and confusion. Frequently, not all signs and symptoms occur, and the illness may progress | | | | |
